技术规格

Background:	DsRed is a recently cloned 28-kDa fluorescent protein responsible for the red coloration around the oral disk of a coral of the Discosoma genus. DsRed has attracted tremendous interest as a potential expression tracer and fusion partner that would be complementary to the homologous green fluorescent protein from Aequorea, but very little is known of the biochemistry of DsRed.
Applications:	WB, IHC
Name of antibody:	DsRed-Monomer
Immunogen:	DsRed-Monomer tagged recombinant protein
Full name:	DsRed-Monomer
IHC positive control:	Frozen section Brain tissue
IHC Recommend dilution:	25-100
WB Positive control:	HEK293T cells were transfected with the pCMV6-ENTR

	Y control (Left lane) or pCMV6-ENTRY DsRed-Monomer (right lane) cDNA for 48 hrs and lysed
WB Recommended dilution:	500-2000
