

## 小鼠抗 mOrange 单克隆抗体

- 中文名称： 小鼠抗 mOrange 单克隆抗体
- 英文名称： Anti-mOrange mouse monoclonal antibody
- 相关类别： 标签抗体
- 储 存： 冷冻（-20℃） 避光
- 宿 主： Mouse
- 抗 原： mOrange
- 反应种属： mOrange
- 标 记 物： Unconjugate
- 克隆类型： mouse monoclonal

### 技术规格

<b>Background:</b>	mOrange is extremely bright orange fluorescent protein monomers which can be used as tags or reporters. mOrange fluorescent proteins is mutants derived from mRFP1, a monomeric mutant of DsRed, which was developed in Dr. Roger Tsien's lab by direct mutagenesis. mOrange excitation and emission maxima are 548 and 562 nm, respectively.
<b>Applications:</b>	WB, IHC
<b>Name of antibody:</b>	mOrange
<b>Immunogen:</b>	mOrange tagged recombinant protein
<b>IHC positive control:</b>	Frozen section Brain tissue
<b>IHC Recommend dilution:</b>	25-100
<b>WB Positive control:</b>	HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY mOrange n e) cDNA for 48 hrs and lysed

WB Recommended dilution:

500-2000
